

# META TIGER

100% DECENTRALIZED  
METAVERSE+WEB3.0

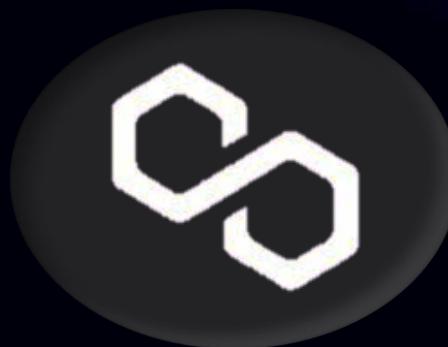

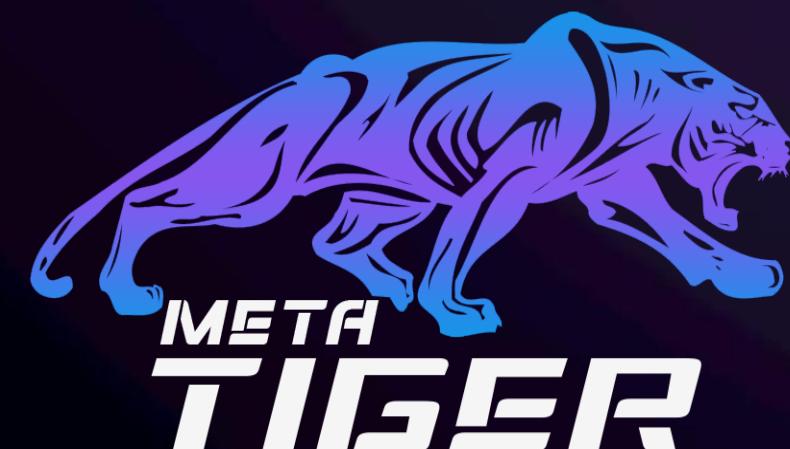

## DECENTRALIZATION

What does "decentralized" mean? What are the advantages and what are the benefits?

Decentralized marketing is created with an automated contract that offers you maximum security and sustainability. A smart contract is an automatic execution algorithm. It exists within the Polygon **blockchain**, one of the TOP cryptographics currency.

Smart contracts, like cryptocurrencies, are decentralized. They work strictly according to the underlying program, without the possibility of subsequently changing the defined execution. The code that contains all the logic of the contract expiration is on the blockchain and all calculations are provided by millions of computers around the world. This ensures that there is no risk of hacking into the smart contract and stopping the project.

\* The blockchain is an immutable record of transactions and information, which is cryptographically protected from any subsequent manipulation using thousands of independent computers worldwide

Polygon

DAI

## ◀◀◀◀ (POS) Dai Stable Coin

DAI is an algorithmic stablecoin issued by MakerDAO, an Ethereum-based protocol. But now DAI available in multiple networks & blockchains that seeks to maintain an exact ratio of one-to-one with the U.S. dollar.

**DAI is an algorithmic stablecoin like USDT. But unlike USDT, it's overcollateralized.**  
**That means when users lock up their crypto and borrow against it, they're allowed to borrow DAI worth 55% to 75% of their collateral.**  
**This model is much safe, according to some experts.**

**Polygon (MATIC) is an Ethereum token that powers the Polygon Network, a scaling solution for Ethereum. Polygon aims to provide faster and cheaper transactions on Ethereum using Layer 2 sidechains, which are blockchains that run alongside the Ethereum main chain.**
